Guidelines Breast
Version 2023.1E

- **Versions 2002 – 2022:**
Blohmer / Budach / Friedrich / Friedrichs / Göhring / Huober / Janni / Krug / Kühn / Möbus / Rody / Scharl / Schmidt / Seegenschmiedt / Souchon / Thomssen / Untch / Wenz
- **Version 2023:**
Budach / Krug / Solbach

Preliminary Note

- **The recommendations on adjuvant radiotherapy for breast cancer are based on a consensus discussion between AGO and DEGRO experts.**
- **For technical radiotherapy details, we refer to the corresponding updated DEGRO practical guidelines.**

Radiotherapy (RT) after Breast Conserving Surgery (Invasive Cancer): Whole Breast Irradiation

© AGO e. V.
in der DGGG e.V.
sowie
in der DKG e.V.

Guidelines Breast
Version 2023.1E

- **Radiotherapy of the affected breast**
- **Moderately hypofractionated radiotherapy (total dose approx. 40 Gy in 15-16 fractions within 3-5 weeks)**
- **Ultra-hypofractionated RT (total dose 26 Gy in 5 fractions over one week = 1 fraction/day or 28.5 Gy in 5 fractions over 5 weeks = 1 fraction/week)**
- **Conventionally fractionated radiotherapy (total dose about 50 Gy in approx. 25-28 fractions in 5-6 weeks)**
- **Ultra-hypofractionated RT (total dose 26 or 28,5 Gy in 5 fractions in 1 or 5 weeks)**
- **In case of life expectancy < 10 years and pT1, pN0, R0, ER / PR-positive, HER2-negative, endocrine therapy (all criteria), radiotherapy can be omitted after individual counseling, resulting in an increased risk for in-breast recurrence.**

	DBCG-IMN	KROG 15-03	
Patient number	3089	735	
Timeframe	2003-2007	2008-2013	
Median FU	14.8 years	8.3 years	
Design	Prospective cohort study, right-sided treated with IMNI, left-sided without IMNI. All received SCV-RT.	Randomized controlled trial All received SCV-RT, randomization to +/- IMNI.	
Inclusion criteria	N+, no NACT	N+, ALND with ≥8 lymph nodes, no NACT	
Stratification	All patients	Medial/central	lateral
Distant recurrence	HR 0.88 (0.78-0.99)	HR 0.44 (0.23-0.85)	HR 1.07 (0.68-1.68)
Breast-cancer mortality	HR 0.88 (0.78-1.00)	HR 0.41 (0.17-0.99)	0.91 (0.53-1.57)
Overall survival	HR 0.86 (.77-0.96)	HR 0.51 (0.24-1.11)	1.07 (0.64-1.77)
Subgroup analysis	No benefit in 1-3 LN+ with lateral tumor, larger benefit with N2-3	Benefit for ER/PR-negative tumors (p-interaction = 0.03)	

Fractionation of Radiotherapy in Case of Regional Nodal Irradiation

Guidelines Breast
Version 2023.1E

- **Conventionally fractionated radiotherapy (total dose about 50 Gy in approx. 25-28 fractions within 5–6 weeks)**
- **Moderately hypofractionated radiotherapy (total dose approx. 40–43.5 Gy in 15-16 fractions within 3–5 weeks)**
- **Ultra-hypofractionated RT (total dose 26 Gy in 5 fractions over one week = 1 fraction/day)**

* Simultaneous parasternal RT should be avoided in patients with HER2-positive tumors and tumor-localisation on the left side			
** With hypofractionated RT approx. 40 Gy, consider dose reduction of Capecitabine, Pat. with high risk for locoregional recurrence			
*** In currently available phase III-trials (monarchE, PALLAS, Penelope-B) RT was given before initiation of CDK4/6-inhibitors. No definitive signs of significantly increased toxicity with concomitant RT in the palliative setting.			
**** In currently available phase III-trials, RT was given before initiation of Olaparib.

Woodward et al. Int J Radiat Oncol Biol Phys. 2017 Nov 15;99(4):777-783

- Prospective phase trial, 32 pat. with LABC, sim. def. / neoadj. chemoradiotherapy, median total dose 66 Gy
- “The first 9 patients analyzed [...] received CAP 825 mg/m² twice daily continuously beginning on the first day of RT. **Because of observed excess grade 3 toxicity the protocol was amended,** and subsequent patients received CAP only on RT days (5 days per week).”
- “Noncontinuous CAP dosing was much better tolerated than continuous dosing. **Thirteen of 26 patients (50%) had grade ≥ 3 and higher treatment-related dermatologic toxicity.** “

Alhanafy et al. Menoufia Medical Journal 2015, 28:325-332

- Randomised phase II-trial, 100 pat., adj. Radiotherapy 40 Gy / 15 fr. +/- CAP 825 mg/m² Mo-Fr, LABC
- “ [...] **concurrent capecitabine was feasible with a high percent of patients (96%),** [...] only two out of 50 (4%) patients had capecitabine dose modification ...”.
- “**All early toxicities were GI/GII.** Radiation dermatitis had a peak incidence in the last few fractions of the radiation therapy and the week after radiotherapy; no treatment interruption was needed and the incidence was close in both groups”.
- Radiation dermatitis grade I 14% vs. 18%; grade 2 4% vs. 4%
